

CLEAN AIR Group, Inc.

For Immediate Release

Steve Levine Appointed to Board of Directors of the National Green Energy Council

Fairfield, CT – May 6, 2008 – Clean Air Products, Inc. announced today that Steve Levine, President and CEO of Clean Air Group, Inc and AtmosAir™ Solutions Products, is appointed to the National Green Energy Council's Board of Directors as the organization's Air Quality Liaison. This is the National Green Energy Council's first board seat that represents air quality. Levine's appointment is effective for two years beginning April 1, 2008.

"I am honored to have been appointed to the National Green Energy Council's Board and look forward to working in this new role to help both the National Green Energy Council and the air quality industry," said Levine.

The Environmental Protection Agency (EPA) has deemed Indoor Air Quality (IAQ) one of the top five environmental health risks the US faces today. Because homes and commercial buildings are tighter and tighter these days and are bringing in less fresh air, the agency says indoor pollutants levels can be two to five times -- and sometimes more than 100 times -- as high as outdoor levels.

"We are pleased that Steve agreed to join our board and represent this important aspect of our environment," said Ralph Avallone, President, National Green Energy Council. "Steve brings considerable knowledge and expertise in the area of air quality as well as a proven commitment to green practices in improving indoor air quality. He is an innovator in providing cutting edge solutions that will change the way air quality is improved."

About Clean Air Group

Clean Air Group was formed in 2004 and is headquartered in Fairfield, CT. The company brings to market products and technologies that improve the quality of our environments.

About AtmosAir Solutions

AtmosAir Solutions is a product line of Clean Air Group, Inc. AtmosAir Solutions' mission is to bring and restore to every indoor environment possible the same clean and pure quality of air that is typically only found at higher mountain elevations. The products use a unique and proven patented air purification process that can eliminate mold, control bacteria and the spread of airborne viruses and reduce airborne particles and germs that get past normal filtration solutions with no harmful by-products such as ozone or ultraviolet light. AtmosAir Solutions products are designed for use in homes, condominiums, apartments, schools, hospitals, commercial office buildings, hotels, athletic facilities, beauty and nail salons, manufacturing facilities and many other applications where improved indoor air quality is important or necessary. The products are available worldwide. Visit www.AtmosAir.com for further information.

About The National Green Energy Council

The National Green Energy Council is a national non-profit association comprised of individuals and companies that promote "Green" (sustainable) forms of energy production, renewable energy sources, sustainable design practices and advanced thinking in utilizing education and information for the promotion of being better stewards of our environment. At the Federal and state level, the organization works to shape the most successful renewable portfolio standards and other key policies.
